Abstract

Work practices are ways of structuring things that must be done, or ways in which something is done. Several agencies have issued work practices for preventing asbestos exposure but only a few documents dealing with safe work practice for asbestos in general industries are available.

In 1984, the International Labor Office (ILO) issued an ILO code of practice, which provides recommendations and safe work practices for asbestos. The practices detailed in this document are appropriate actions to be taken by Asian developing countries for preventing asbestos exposure. In addition, the regulations and guidelines of the US, the UK and Canada on asbestos are reviewed in this document. The detailed recommendations and requirements of the regulations and guidelines reviewed in this document should be read in the context of local conditions, the scale of operation involved and the technical possibilities of Asian countries.
