**Abstract**

Asbestos has been used widely in various industries because of its useful physical and chemical properties such as high flexibility, durability of abrasion and heat resistance. The published literature contains numerous data sets on airborne asbestos concentrations in various occupational settings. In 2007, Williams et al reviewed the published and selected unpublished literature on historical asbestos exposure among skilled craftsmen in various non-shipyard and shipyard settings. In this document, 24 published studies, including recent ones not covered by Williams et al, on asbestos exposure concentration are reviewed and exposure levels commonly encountered in variable situations and conditions in occupational settings are presented according to the industries and worker tasks in the format of tables. In spite of limited detailed information associated with the data sets, data mining through this document and Williams's work shall provide information about asbestos exposure levels of various situations and conditions in occupational settings.
